

Quivira 3.7 – Private Use Area

The Private Use Area consists of 6,400 Codepoints which will never be assigned to any characters in the Unicode Standard. They are meant to be used for own characters in individual fonts.

The character names used in this documents are own inventions and not standardised in any way. The regular names of these characters according to Unicode are “PRIVATE USE CHARACTER-” followed by the codepoint of each character, i.e. they range from “PRIVATE USE CHARACTER-E000” to “PRIVATE USE CHARACTER-F8FF”. Accordingly, the blocks and their names are also self-invented. These names always start with “Private Use Area:” to make sure that they can never collide with a real Unicode block.

For a complete overview of all characters in Quivira see [Quivira.pdf](#); for meanings and usage of characters in other blocks see <http://www.unicode.org>.
